

# Bliss® Pest Protection. Leaders in K9 Detection and Thermal Remediation Technology

## How Can You Detect and Eradicate Bed Bugs Completely?

*Discreet and comprehensive bed bug detection and eradication for homeowners, tenants, healthcare facilities, and property managers.*

9 Bed Bug Inspection teams are amazingly reliable. The dogs' keen sense of smell can detect a teaspoon of sugar in a million gallons of water, or two Olympic-sized pools worth. Relying on more than 220 million olfactory receptors in the nose, the mission of a bed bug dog is simple – find bed bugs. It also results in more targeted treatment, resulting in time and cost savings.

### Bed Bug Elimination Options

#### • One Step Thermal Remediation Program

Bed bug heat treatments, 100% green, are the single most effective way to kill bed bugs in all life stages. Ideal for both residential and commercial environments, structural heating is the safest, quickest and most thorough way to eliminate bed bugs. Our self-contained generators power cutting-edge, proprietary heating systems, 100% chemical free, (that do not run on our customers' electricity) and a proven methodology to effectively rid a structure of any level of infestation. Monitors record and store temperature readings throughout an entire room, accurately measuring fluctuations, optimizing and controlling heat output. Certified by the National Pest Management Association guidelines.

#### • Conventional 5-Part Protocol Treatment

Eliminate bed bugs with Bliss Pest Protection's Conventional Treatment

consisting of: 1) HEPA-Vacuuming; 2) Steam Treatment; 3) Dusting of Voids; 4) Crack and Crevices Treatment; 5) Encasements to protect mattresses and box springs from bed bugs. When you want to detect and eradicate bed bugs, call us. *We've been safeguarding bedrooms and other living quarters since 1882.*

*Protecting homes and businesses depends upon comprehensive prevention programs and effective detection and eradication techniques that can guarantee long-lasting results.*

*Guardians of your environment.*

Discreet and comprehensive bed bug detection and eradication for homeowners, tenants, healthcare facilities, and property managers.

### Rapid Response Approach

Within 24 hours of hearing from you our rapid response team of service managers, service technicians and, when needed, on-staff entomologists quickly identify issues, evaluate strategy, prioritize solutions, and establish treatment schedules.

### Thorough Inspection

Each Plan begins with a Bliss consultant who surveys your property for signs of bed bugs, develops a proposal, and prescribes a plan to discreetly eliminate the infestation.

### Heat Treatment Completed in One Day

While the amount of time for treatment depends on the area requiring heat, we pride ourselves on the fact that no matter how large the treatment area, we can complete the assignment in one day. Our patented, cutting-edge technology combines heat and air-flow, and turns the treatment area into a supercharged convection oven, significantly reducing the time it takes to heat an infested area and kill all stages of bed bugs.

### Complete Discretion

All of our equipment and vehicles are unmarked. Even our uniforms are discreet and have no markings to reflect what we will be doing in your property, although our technicians carry Bliss® Pest Management specialists ID.

### Minimal Preparation

There is minimal effort involved in preparing for a heat treatment. We will provide you with a preparation sheet identifying what needs to be done prior to our arrival and includes items that should be removed from the property.

### We Don't Use Your Electricity

It's part of our Integrated Pest Management Programs (IPM) that minimize impact to the environment.

### Comprehensive Reporting & Documentation

Once approved the treatment program results are monitored on an hourly basis by our technicians and meticulously tracked and shared with you, on-demand.
